Drawings

1. The drawings are objected to because “space A” as mentioned on page 8, line 26 is not labeled in any figures. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities: On page 6, line 7, numeral 6 refers to a sub-circuit board and in the abstract numeral 6 refers to an indicator. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over (JP 2592418) in view of Kurisaki et al. (09-089618) (hereinafter Kurisaki).

The Japanese reference (JP 2592418) teaches all the features of the instant invention including a flow sensor (56) for measuring the flow rate, a block body (20) and the circuit board (18) accommodated in a housing (10), an indicator (60) and an operating switch (68) provided on the front surface of the housing, an inlet and an outlet provided on one side of the housing. The reference also teaches the U-shaped flow path and a flow-regulating valve (66). The Japanese reference (JP 2592418) does not teach a terminal for external connection of the circuit board. Kurisaki teaches a terminal connection (44) for external connection. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to use the teaching of Kurisaki in the Japanese reference (JP 2592418) with minor modification to the mounting structure since such an arrangement would provide access to the device from a remote location or and individual can plug in a hand held device to the metering device to collect the measured data. As to the water-absorbing sheet provided around the inlet and the outlet, it would be within the scope of a skilled individual to use any known leak preventive method to prevent leakage at the connection point.
